# SMART Workplace

SMART Workplace, provided by Spanish Point as a licensable solution for our customers, is an integrated collection of pre-developed software components tailored for common business scenarios. These components enhance value and functionality not inherently available in Microsoft Teams and SharePoint.

Designed for today's hybrid workplace, our SMART Workplace solution facilitates secure collaboration within the Microsoft 365 application suite, including Teams and SharePoint. Serving as the digital hub for employee collaboration, it seamlessly integrates people, content, and tools, enhancing team engagement and effectiveness.

SMART Workplace enhances the use of Microsoft 365 as follows:

Leveraging Microsoft 365 applications, Spanish Point extends out-of-the-box capabilities to deliver a modern hybrid workplace solution. This provides customers with an engaging and mobile solution for modern work, enhancing communication and collaboration at a fraction of the cost of traditional bespoke solutions.

At Spanish Point, we combine Microsoft best practices, global research, and extensive customer experience to offer a proven methodology for designing and implementing modern work solutions. This allows us to build communication and collaboration solutions with user-centric design, corporate branding, and future-proofing based on Microsoft's modern user interface for SharePoint.

The SMART Workplace library includes various features such as News Aggregation, Quick and Easy Page Creation, Event Aggregation, Q&A Bot, Enterprise Social, Search, Quick Links, Branding customisation, Content Intelligence, Mobility, People Finder, and Surveys.

Moreover, SMART Workplace serves as a governance template for your organisation's Microsoft Viva, Teams, and SharePoint sites. It provides controls on site creation, naming, and classification, guest membership policies, expiration, retention, and archiving policies, access to features and functionalities, and security and compliance capabilities of Microsoft 365.

Included in the package is the Spanish Point Provisioning Engine, ensuring consistent creation of collaboration workspaces with shared aesthetics, specific permissions, metadata, and common site features. This engine allows for self-service boilerplate site creation, a request and approval process for site creation, aggregation of content, and control over sites according to your business practices, such as making a site read-only for archiving purposes.
